EDUCATION

**BACHELOR IN
COMPUTER SCIENCE |**
The Academic College of
Tel Aviv-Yafo, April 2024

SKILLS

LANGUAGES

TypeScript | JavaScript | Python |
Java | C++ | C# | SQL | Bash

FRONTEND

React | Next.js | MUI | HTML | CSS

BACKEND & CLOUD

AWS Amplify | AppSync | DynamoDB
| Lambda | Node.js | FastAPI |
PostgreSQL | MongoDB

AI & CORE CONCEPTS

LLM Applications | RAG Pipelines |
Prompt Engineering | Embeddings &
Vector Databases | AI Agents |
REST APIs | Asynchronous
Programming | Data Structures |
Algorithms | CI/CD | Cloud
Fundamentals |

LANGUAGES

- English - Fluent
- Hebrew - Native

MILITARY SERVICE

Combat Engineer Sergeant |
November 2016- July 2019

SUMMARY

Full-Stack Software Engineer focused on building AI-powered applications and scalable production systems. Experienced in developing end-to-end solutions using TypeScript, JavaScript, Python, React, Next.js, Node.js, and cloud-native technologies. Hands-on experience building RAG-based applications using LLM APIs, embeddings, vector search, document processing, and user-isolated data pipelines. Previously contributed to the end-to-end development of a production multi-tenant recruitment SaaS platform, including frontend architecture, serverless backend services, authentication, authorization, APIs, and scalable data models.

Strong product mindset with the ability to translate complex business requirements into reliable, maintainable solutions.

WORKING EXPERIENCE

FULL STACK DEVELOPER

Slash-In | March 2025 - Present | slash-in.com

Leading end-to-end development of a production-grade multi-tenant SaaS platform serving Talents, Employers, and Partners.

- Architect and implement complex multi-step onboarding flows and wizard-based user journeys using React, Next.js, and TypeScript
- Design scalable frontend component systems aligned with product and Figma specifications
- Build and maintain AWS serverless backend infrastructure using Amplify, AppSync (GraphQL), DynamoDB, and Lambda
- Model domain entities, design secondary indexes, and evolve schemas across preview and production environments
- Lead data migration processes and manage production environment updates
- Improve candidate-to-opportunity matching algorithm, including scoring logic refinement and weight separation
- Optimize S3 media handling and performance for image uploads and rendering
- Integrate CI/CD workflows via GitHub and AWS Amplify pipelines
- Collaborate closely with Product and Design to deliver responsive, pixel-accurate, production-ready interfaces
